NAMA BIO-Center

Company Profile

Start Up

Executive Summary

NAMA Bio is a specialized bioequivalence research center established under NAMA Research to strengthen Saudi Arabia's pharmaceutical development ecosystem through high-quality, locally executed bioequivalence studies. The Center is being developed to meet SFDA, ICH-GCP, and international regulatory standards, with full operational readiness planned by early 2026.

Integrity — **Innovation** — **Collaboration** — **Quality** — **Impact**

Vision

To be the leading bioequivalence center in the MENA region, positioning Saudi Arabia as a trusted hub for pharmaceutical research and regulatory excellence.

Mission

To deliver high-quality, SFDA & GCC-compliant bioequivalence studies that accelerate generic drug approvals and strengthen Saudi Arabia's pharmaceutical research ecosystem.

NAMA Bio directly supports Vision 2030 by localizing pharmaceutical R&D, reducing dependency on foreign research infrastructure, and enabling the growth of a competitive, innovation-driven life sciences sector in Saudi Arabia.

VISION رؤيـــة 2030
المملكة العربية السعودية
KINGDOM OF SAUDI ARABIA

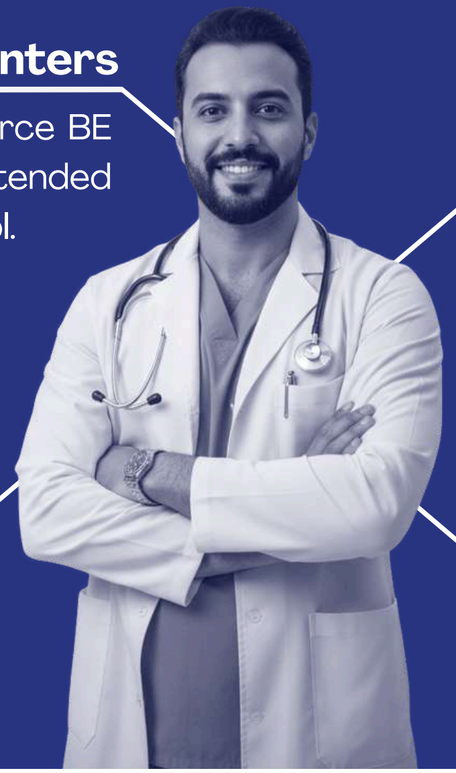
The Market Gap We Address

Absence of Fully Operational Local BE Centers

Pharmaceutical companies are compelled to outsource BE studies to international centers, resulting in extended timelines, higher costs, and limited operational control.

High Financial & Logistical Burden

Conducting BE studies abroad introduces additional expenses related to travel, sample shipment, and foreign vendor management.



Regulatory Delays & Inefficiencies

The lack of synchronized local clinical and analytical data contributes to prolonged SFDA review cycles, slowing generic drug registrations and market entry.

Limited Access for Local Manufacturers

Small and mid-sized pharmaceutical companies face restricted access to timely BE studies, constraining innovation and competitive participation in the Saudi market.

NAMA Bio Center is established to close this gap by providing a reliable, high-quality, and locally governed bioequivalence platform aligned with national priorities and regulatory expectations.

Our Solution

NAMA Bio Center delivers a comprehensive, locally executed bioequivalence solution designed to meet Saudi Arabia's regulatory, operational, and strategic needs.

End-to-End Local Bioequivalence Execution

Conducting bioequivalence studies entirely within Saudi Arabia, from clinical execution to data management, ensuring faster timelines and improved regulatory efficiency.

Saudi Population-Based Data

Generation of high-quality bioequivalence data derived from the local population, enhancing relevance, regulatory robustness, and national data ownership.

SFDA-Aligned Quality & Compliance

All studies are designed and executed in full alignment with SFDA requirements, ICH-GCP guidelines, and international best practices, ensuring regulatory confidence.

Cost-Effective & Time-Efficient Model

By eliminating the need for foreign outsourcing, NAMA Bio Center significantly reduces study costs and approval timelines for pharmaceutical manufacturers.

Through this integrated solution, NAMA Bio Center enables pharmaceutical companies to bring high-quality generic medicines to market faster, more efficiently, and with full regulatory confidence.

Our core services

Bioequivalence study services

Comprehensive end-to-end bioequivalence study execution covering all scientific, clinical, and operational aspects.

Bioanalytical Services

Comprehensive end-to-end bioequivalence study execution covering all scientific, clinical, and operational aspects.

Training & Capacity Building

Comprehensive end-to-end bioequivalence study execution covering all scientific, clinical, and operational aspects.

Bioequivalence Study Services

NAMA Bio Center delivers comprehensive bioequivalence study services designed to meet SFDA and international regulatory requirements while supporting efficient and reliable generic drug development.

- Design and conduct of bioequivalence studies across fasting, fed, and steady-state conditions in full alignment with SFDA and ICH-GCP requirements.
- End-to-end protocol development, including scientific rationale, study design selection, and regulatory-ready amendments.
- Robust sample size calculation and statistical planning to ensure adequate power, regulatory acceptance, and optimized timelines.
- Controlled subject housing, dosing, blood sampling, and compliance monitoring within a supervised clinical research environment.

Our on-ground teams ensure predictable timelines, consistent site performance, and global-quality execution

Bioanalytical Services

NAMA Bio Center provides high-quality bioanalytical services to support accurate pharmacokinetic assessment and regulatory confidence in bioequivalence studies.

- Bioanalytical method development and validation using LC-MS/MS in accordance with GLP and international regulatory standards.
- Precise sample analysis for pharmacokinetic parameters supporting standard, partial replicate, and full replicate BE study designs.
- Comprehensive bioanalytical quality control, documentation, and data traceability to ensure audit readiness and data integrity.
- Preparation of complete bioanalytical reports structured for SFDA review and regulatory submission.

Our bioanalytical services ensure dependable pharmacokinetic data that underpins confident regulatory decision-making.

Training & Capacity Building Services

NAMA Bio Center offers structured training and capacity-building programs to strengthen clinical research competence and regulatory compliance within the Saudi pharmaceutical ecosystem.

1 Good Clinical Practice (GCP) Training

Comprehensive GCP programs aligned with ICH-GCP guidelines, ensuring ethical conduct, subject protection, and data integrity in clinical research.

2 Bioequivalence Training

Specialized training covering bioequivalence study concepts, protocol execution, sample handling, and clinical trial operations.

3 Regulatory & Quality Training

Practical sessions on SFDA requirements, SOP implementation, quality management systems, and audit preparedness.

4 Customized Institutional Training

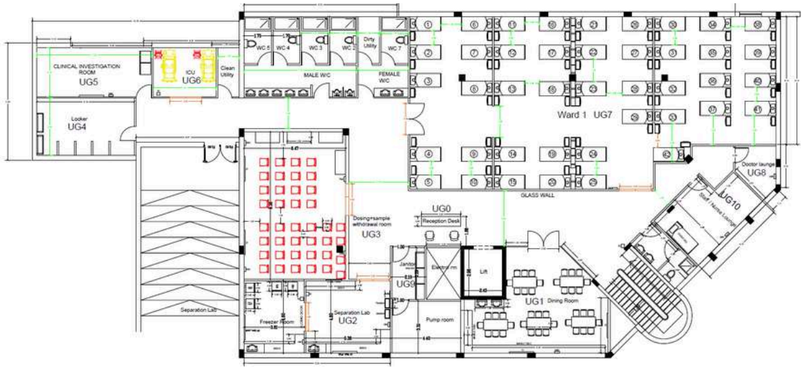
Tailored training programs developed for pharmaceutical companies, CROs, investigators, and clinical research staff based on operational needs.

Through targeted and high-quality training initiatives, NAMA Bio Center contributes to sustainable workforce development and long-term excellence in clinical research and bioequivalence studies in Saudi Arabia.

Who we are

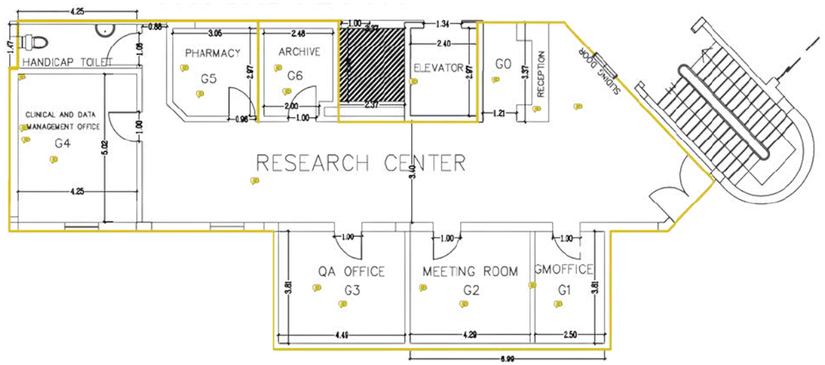
NAMA Bio, co-branded with **CARE Medical** and **King Faisal Specialist Hospital & Research Centre (KFSHRC)**, is establishing a purpose-built clinical infrastructure to support high-quality bioequivalence studies, with construction currently in its final phase and full operational readiness targeted for April 2026.

Our Valued Partners



BE Unit (Clinical Unit Layout – Basement Floor – 670 m2)

- Overnight patient ward (beds for participants)
- Dosing area with secure drug storage
- Vital signs & safety monitoring stations
- Blood sample collection room
- Cold-chain storage before transport



BE Unit (Clinical Unit Layout – Ground Floor – 180 m2)

- Participant reception & registration
- Pharmacy and Archive facilities
- Administrative offices for study coordination
- Meeting and training room
- Operational team and QA offices and stations

Through a carefully designed and clinically integrated environment, NAMA Bio Center is positioned to deliver safe, compliant, and efficient bioequivalence study execution upon go-live in April 2026.

Our Ecosystem

NAMA Bio Center is uniquely positioned within an integrated clinical research ecosystem, enabling seamless execution of bioequivalence studies through end-to-end capabilities beyond those of standalone bioequivalence facilities.

Full-Service CRO

Comprehensive clinical research services covering study design, clinical operations, biometrics, regulatory support, and project management.

Training Academy

Dedicated training programs in GCP and clinical research practices, supporting continuous capacity building and workforce development.

Publishing & Scientific Dissemination

Support for scientific reporting, publications, and knowledge dissemination aligned with research transparency and academic standards.

This integrated ecosystem allows NAMA Bio Center to deliver bioequivalence studies with greater efficiency, governance, and scientific rigor than standalone BE laboratories.

Why NAMA BIO

NAMA Bio Center is designed as a national bioequivalence platform that combines regulatory alignment, operational efficiency, and long-term scalability within Saudi Arabia.

First-Mover Advantage

Among the first purpose-built local bioequivalence centers, enabling early access, priority scheduling, and localized expertise for sponsors.

Local Regulatory Alignment

Deep understanding of SFDA expectations, Saudi clinical research requirements, and submission pathways reduces approval timelines.

Cost & Timeline Efficiency

Local execution minimizes international outsourcing costs, logistical delays, and operational complexity.

National Data Sovereignty

Conducting studies locally ensures control over sensitive clinical and pharmacokinetic data within the Kingdom.

Scalable Regional Hub

Designed for phased expansion in capacity, services, and geography to support growing regional demand.

By integrating scientific rigor with national healthcare priorities, NAMA Bio Center offers sponsors a reliable, future-ready partner for bioequivalence studies.
