Revolutionizing Healthcare Procurement & Delivery in MENA

Prepared by: Dr. Theeb Alkahtany | July 2025

Agenda

1. **Who We Are**
2. Problem & Market Opportunity
3. Our Solution
4. Business Model & Execution
5. Financials & Unit Economics
6. Team & Roadmap

Introduction

Healthcare systems across MENA are bleeding billions due to outdated, volume-based procurement—Majour solves this with the first Saudi-native SaaS platform that ties payments to real patient outcomes, transforming inefficiency into measurable value.

Mission

To accelerate value-based healthcare in MENA through digital tools that link outcomes to reimbursement.

Vision

We envision a healthcare future where spending is measured by outcomes, not by volume—where value defines the standard of care across every clinic, payer, and patient journey.

Agenda

1. Who We Are
2. **Problem & Market Opportunity**
3. Our Solution
4. Business Model & Execution
5. Financials & Unit Economics
6. Team & Roadmap

$300B wasted globally on low-value healthcare (WHO, 2021).

>70% In KSA, >70% of healthcare spending is on reactive treatment, not prevention or outcome-based services (CHI, 2024).

No VB Most interventions are not evaluated for actual health impact — causing budget waste and inefficiency.

Market Opportunity

Trends

- Saudi Health Sector Transformation Program (**Vision 2030**) prioritizes **outcome-based reimbursement**
- **80%** of GCC nations have initiated **VBHC-related policy reform** (source: OECD)

SOM

$480M

VBHC addressable IT & licensing spend in GCC by 2027

SAM

$22B

spent on procurement of drugs, devices, services

TAM

$105B

total MENA healthcare spending (WHO, 2023)

Healthcare delivery must become intelligent, ethical, and outcomes-driven—where every intervention is measured by the value it brings to patients, not just the cost it incurs.

Agenda

5 Financials & Unit Economics

6 Team & Roadmap

Ma'Jour
VBP/VBHC

Ma'Jour is the first SaaS platform in MENA that operationalizes **Value-Based Healthcare** (**VBHC**) and **Value-Based Procurement** (**VBP**) through **outcome-driven contracting, care pathway licensing, and blockchain-verified smart payment automation.**

VBHC BUNDLE LICENSING ENGINE

(VBP) SCORING ENGINE

PROMs / PREMs COLLECTION

BLOCKCHAIN-ENABLED SMART CONTRACT

Ma’Jour
VBP/VBHC

1 We **license pre-built**, **outcome-based care bundles** —customizable for local hospitals and aligned with Saudi Vision 2030 reform.

2 Our **VBP scoring engine** helps procurement teams evaluate suppliers based on clinical outcomes, not just cost.

3 We capture **PROMs and PREMs** in Arabic to track patient recovery, experience, and real-world treatment effectiveness.

4 **Smart contracts on blockchain** trigger payments only when verified health outcomes are achieved.

Traditional Insurance

Hospital → Procurement → Supplier → Delivery → Use → Invoice → Reimbursement → Report

Ma'Jour VBP/VBHC

Payer/ Hospital → **Ma'Jour** → **Licensed Bundle** → **Smart Provider** → **Care** → **Outcome Validation** → **Blockchain Payment and Value Insights**

HOW IT WORKS

1 BUNDLE ACTIVATION

Hospitals or payers license care bundles via Majour (e.g., trauma, maternity, oncology).

2 SMART PATHWAY DELIVERY

Providers deliver care as per pathway guidelines while PROMs and milestones are tracked.

3 OUTCOME VALIDATION

Majour verifies outcomes using integrated clinical + patient-reported data (PROMs/PRIMs).

4 BLOCKCHAIN-POWERED PAYMENT

A smart contract is triggered for outcome-based payment release.

5 VALUE INSIGHT & FEEDBACK

Dashboards present bundle ROI, procurement value, and provider performance metrics.

We help payers, hospitals, and suppliers shift from volume-based spending to value-based financing

Unique Value Proposition

First Saudi-native SaaS platform combining VBHC + VBP in one stack.

Blockchain-native smart contracts automate performance-linked reimbursement.

Arabic PROMs/PREMs suite integrated with bundled pathways and payment triggers.

Licensable care bundles accelerate hospital VBHC readiness.

Designed to be NPHIES-, DRG-, ZATCA-, and GOSI-**compliant from day one.**

6 Team & Roadmap

Structure & Revenue Streams

Annual Licensing Fees

Clients

Public health clusters (e.g., GHC, SEHA, MoH entities)

Private hospital networks (e.g., Sulaiman Al Habib, Dr. Fakeeh)

Insurance payers (e.g., GOSI, BUPA, Tawuniya)

Government-linked procurement bodies (e.g., NUPCO)

Key Metrics

CAC	LTV	AOV per Contract	Bundle Gross Margin	Payback
$7K	**$120K per client per year**	**~$12K**	**~65%**	**6–9 months**

COMPETITIVE LANDSCAPE

✓	Outcome Registry Linkage	✗	✗	✓
✓	Regional Customization	✗	✗	✗
✓	NPHIES/NPHI Compliant	✗	✗	✗

IMPACT

Procurement Savings

Majour's outcome-based procurement model reduces overspending on ineffective interventions — delivering an estimated **15–30% cost savings per licensed bundle** (based on pilot projections and OECD data).

Clinical Quality Improvement

By linking payment to outcomes, Majour i**mproves provider adherence to evidence-based care pathways** — reducing variation in care and medical errors.

Transparency & Accountability

For the first time, payers and policymakers get **real-time insight into how much value each riyal buys** — improving trust in procurement and healthcare spend.

Patient-Centered Transformation

PROMs and PREMs capture the patient voice in real time — empowering health systems to measure what matters most to patients: recovery, dignity, and quality of life.

ROADMAP

2026

National Expansion

We scale across Saudi Arabia with **10+ hospital deployments**, payer contracts, and full integration with national systems.

2027

Regional Growth

We **expand into the GCC,** launch the Majour Marketplace, and publish the first MENA PROMs benchmark report.

2028

Product Evolution

We diversify into **new clinical areas**, launch predictive procurement tools, and partner with global policy leaders.

2029

Market Leadership

We **lead the region with shared-savings contracts**, AI-powered planning, and expansion into Egypt and Jordan.
