Partnership Proposal: Majour VBP/VBHC × EXPRO

Prepared by Theeb Alkahtani MD MBE

1. The Challenge Facing EXPRO

EXPRO's mandate is to drive efficiency and value in public procurement. In healthcare, however, systemic challenges persist:

- **Fee-for-service inefficiencies:** Payments are triggered regardless of outcomes, leading to overspending.
- **Premium inflation:** Insurance costs rise annually with little correlation to service quality.
- **High medical loss ratios:** Employers, insurers, and government programs face unsustainable cost pressures.
- **Low transparency:** Procurement outcomes are rarely tied to measurable patient value.
- **Fragmentation:** Disconnection between EXPRO, insurers, and providers reduces system-wide efficiency.

These challenges cause budget leakage, poor outcomes, and inefficiency, conflicting with Vision 2030's healthcare and fiscal sustainability goals.

2. The Solution: Majour VBP & VBHC

Majour is the first Saudi-native SaaS platform designed to operationalize Value-Based Healthcare (VBHC) and Value-Based Procurement (VBP) through:

- Outcome-based procurement scoring – Suppliers are evaluated on clinical outcomes, not just price.
- Arabic PROMs/PREMs collection – Capturing patient recovery, dignity, and experience in real-time.
- Blockchain-enabled smart contracts – Payments released only when outcomes are verified.
- Licensable Care Bundles – Ready-to-deploy, evidence-based care pathways (oncology, maternity, trauma, diabetes, etc.).
- Compliance-first architecture – Fully aligned with DRG, NPHIES, ZATCA, and GOSI frameworks.

Impact: 15–30% procurement cost savings per licensed bundle, rebates on ineffective interventions, measurable quality gains, and real-time transparency.

3. **Why Now?**
• Vision 2030 & Health Transformation – Procurement efficiency is a national priority.
• CHI readiness – The Center for Health Insurance is championing outcome-based reimbursement.
• Market adoption – Hospitals, clusters, and insurers are already testing VBHC concepts.
• Technology maturity – Saudi-patented, AI-driven, blockchain-native stack available today.
• Capacity building – Providers have digital and operational readiness to engage.

4. Partnership Roadmap with EXPRO

Phase 1: Pilot (2025)
• Joint pilot with CHI, insurers (Bupa, Tawuniya, etc.), and 7–10 selected providers.
• Target 7–10 high-burden procurement categories (e.g., oncology, diabetes, maternity).
• Demonstrate savings, clinical quality improvements, and measurable patient outcomes within 4 months.

Phase 2: National Rollout (2026)
• Build a national network of providers and payers under outcome-based smart contracts.
• Expand bundles to cover all major benefits packages.
• Position EXPRO as the global benchmark for outcome-based procurement.

5. Why EXPRO?
• Direct mandate alignment – EXPRO is tasked with maximizing value in public expenditure.
• First-mover advantage – Saudi Arabia becomes the first nation to deploy VBHC/VBP at scale.
• Financial impact – 15–30% cost savings across billions in procurement budgets.
• Trust & transparency – Blockchain-verified outcomes restore confidence between government, providers, and payers.
• Scalable model – From pilot to national coverage, fully integrated with existing systems.

6. Call to Action

We propose initiating a joint pilot program under EXPRO's sponsorship, in partnership with CHI, insurers, and a select group of providers. This low-risk, high-impact pilot will provide measurable results within 12 months and establish a clear pathway for national rollout.
