PROPOSAL: ACTIVATING VALUE-BASED HEALTHCARE (VBHC) SERVICES INSIDE HOSPITALS

Powered by a SaaS Platform & Operational Enablement

Introduction

As Saudi Arabia's healthcare system transitions under Vision 2030 toward outcomes-driven and cost-efficient care, **Value-Based Healthcare (VBHC)** is becoming a national imperative.

We propose launching a comprehensive VBHC enablement model, starting with **Care Medical Hospitals**, through a dedicated **Hospital Intelligence & Integration Unit (HIIU)**, supported by a **SaaS platform** and structured **operational support**. This proposal is designed to be a replicable model across both public and private hospitals in the Kingdom.

Objectives

1. Establish an internal unit to activate VBHC across hospital departments.
2. Provide a fully integrated SaaS platform that supports care pathways, cost tracking, and outcome measurement.
3. Offer this model as a replicable and exportable solution to other health systems.
4. Begin implementation with **Care Medical Hospitals** as the pilot network.

Core Components

1. Hospital Intelligence & Integration Unit (HIIU)

A dedicated VBHC-focused unit embedded within the hospital structure that will:

- Analyze operational and clinical data to improve efficiency and outcomes.
- Implement PROMs/PREMs to measure real patient experiences and health gains.
- Standardize clinical care pathways using international and localized guidelines.
- Monitor patient-level costs across the entire treatment cycle.
- Value based procurement (VBP) to enhance access and protect budgets by eliminating expenditure on interventions or health technologies that do not generate positive outcomes.

2. SaaS Platform – Technology Backbone

The proposed platform provides a robust, modular infrastructure that includes:

- Real-time dashboards for clinical and financial performance indicators.
- PROMs/PREMs collection and reporting engines.
- Analytics for cost-per-patient and per-treatment episode.
- Contract and outcome tracking to support VBP implementation.
- Full integration with existing HIS, RCM, NPHIES, and ZATCA systems.

3. Quick-Win Use Cases (Care Medical Hospitals Focus)

We will launch high-impact VBHC bundles leveraging Care Medical's hospital infrastructure and clinical specialties. These use cases are designed for rapid implementation and early demonstration of value:

VBHC Use Case	Strategic Relevance	Implementation Scope
Occupational Injuries	Core focus for Care Medical and national partnerships (e.g., GOSI)	Complete care pathway from triage to rehabilitation with PROMs tracking
Value-Based Procurement (VBP)	Transition procurement from cost-based to outcome/value-based decisions	Embed cost-effectiveness metrics into selection of devices, implants, and medications
Addiction & Mental Health	Specialized unit near Al-Haram with high societal and regulatory interest	Design care pathways and long-term PROMs-based outcome tracking
Oncology & Chronic Disease Management	High-cost, high-variation areas requiring data-driven outcome tracking	Track survival, quality of life, recurrence, and cost-per-outcome
Hospital-Based Procedures (e.g. Joint Replacements, Endoscopy)	Aligns with DRG reform and international VBHC initiatives	Create bundled pricing models and monitor LoS, readmission, complications, and PROMs

Implementation Roadmap

Phase	Action Plan
1. Assessment	Review existing workflows, data readiness, and internal capacity
2. HIIU Setup	Establish the in-hospital team supported by Majour's operational model
3. Integration	Connect SaaS platform to RCM, HIS, NPHIES, ZATCA, and clinical data
4. Pilot Use Cases	Launch occupational injury and oncology bundles with dashboards
5. Monitoring & Optimization	Weekly dashboard reviews, feedback loops, and refinements

Business Model: SaaS + Managed Services

- **Subscription Fees**: Tiered pricing based on number of beds, specialties, or use cases
- **Managed Support**: Optional add-on for implementation, training, and optimization
- **Expansion Path**: Ability to scale across the Care Medical network and offer white-labeled service to other hospitals

Challenges & Mitigation Strategies

Challenge	Description	Mitigation Strategy
Resistance to Change	Clinicians or admins may be hesitant to shift from FFS	Engage them in co-design and align incentives with outcomes
Data Fragmentation	Poor-quality or siloed data across departments	Implement structured data pipelines and cleansing modules
Knowledge Gaps	Limited familiarity with VBHC concepts	Deliver targeted training programs in Arabic with real case studies
Budget Concerns	Fear of upfront costs and uncertain ROI	Start with 2 pilot bundles, measure quick wins, then expand

Why Care Medical Should Lead This

- National payers (e.g., GOSI, NUPCO) are moving toward value-based contracts
- Competitive hospitals are already developing internal VBHC capabilities
- Payers and regulators are demanding measurable quality and efficiency
- First-mover advantage for Care Medical to lead VBHC in Saudi Arabia

Next Steps

We propose launching this model with **Care Medical Hospitals** as the national pilot:

1. Formalize agreement to establish the HIIU.
2. Activate the first two VBHC bundles (occupational injuries + oncology).
3. Provide weekly reporting dashboards to executive stakeholders.
4. Collect early wins, refine the model, and expand across the hospital group.
