Curacel

Technology Infrastructure For Insurance Business

www.curacel.co

Curacel Grow

Digital insurance management infrastructure and software(s) that enables insurance businesses **distribute products faster, increase efficiency in claims management, and grow revenue.**

- Distribution
- Underwriting
- Claims
- Payments

Components

- API Manager
- Insurer + Partner Dashboards
- NoCode Widgets & Progressive Web Apps (PWA)

Launch new products and distribution channels seamlessly!

Launch new insurance products 10X times faster

Connect to any digital distribution channel with ease

White-labelled and ready to use insurance APIs for policy lifecycle

Functional Requirements Checklist

Function	Availability

Curacel

Client Reviews

OLDMUTUAL

Nthabiseng Mphahlele
Partnerships Manager

"We were looking for a way to offer embedded insurance to our customers, but we didn't have the time to build our own platform from scratch. Curacel was a perfect solution for us"

Heirs General

Michael Kalu
Head, Digital Business

"Curacel is a very unique organisation with very smart technology and we intend to leverage on it at Heirs Group to drive the penetration of Insurance in Nigeria. The whole essence is to provide quick, simple, and accessible products to the everyday person."
Partnership Announcement Post

Curacel

Competitive Advantage

Speed of Deployment

Curacel has already built, deployed, and tested the exact same (Grow) solution for its internal business use. **We currently distribute tangerine products** using this infrastructure, and we have enabled other insurance partners go digital with our Grow solution. Working with us would **save Tangerine at least 9 months in development time.**

Cost Effective Pricing Options

Our SaaS pricing model allows Tangerine to **70% savings on cost of infrastructure, while eliminateìing the burden of high cost in ownership plus maintenance.** We keep the infrastructure running, allowing you to focus on your main business.

Domain Expertise

Curacel is the leading provider of digital insurance distribution solutions in Africa. We are tested and trusted by the biggest insurers across the continent, including Tangerine Africa.

Curacel

Technical Approach

Technical Approach

All systems are developed using Agile methodologies, utilizing mostly laravel/php, nodejs, & vuejs with comprehensive automated unit & E2E test suites to minimize bugs and regressions.

- **Platform Architecture**
  - A modular architecture to accommodate future growth and evolving business needs.
  - Domain driven architecture
  - Microservices for flexibility, resilience, and ease of maintenance.

Technical Approach

- **API First Design**
  - Highly available Resource-oriented Json REST APIs
  - Robust authentication and authorization mechanisms to ensure secure access including request rate limiting
  - Comprehensive API documentation and developer resources for ease of integration and adoption.

- **Data Management and Storage**
  - Resilient RDS Aurora 2.0 powered Mysql 8 databases with multi zone redundancy replicas
  - Automated daily backups and point in time recovery
  - High performance low latency redis cache clusters
  - s3 buckets for static storage

Technical Approach

- **Deployment and DevOps**
  - CI/CD pipelines for
    - automated testing
    - build compilation
    - vulnerability scanning of images
    - container deployment
    - rollback of faulty deployments.
  - Containers are run on AWS auto-scaling serverless compute infrastructure using lambdas, and K8s
  - Regular Automated multi-regional stress tests

Technical Approach

- **Highly Integratable**
  - Integrations with third-party services and internal systems using standardized protocols and connectors.
  - Webhook mechanisms for reliable and efficient asynchronous data transfer.
- **Monitoring and Analytics**
  - Comprehensive monitoring and logging solutions for real-time visibility into system health and performance.
  - Analytics tools for tracking API usage, performance metrics, and business insights.
  - Anomaly detection mechanisms to proactively identify and mitigate issues.

Technical Approach

- **Security and Compliance**
  - All infrastructure is firewalled from public access, except
    - user-facing front ends served by AWS amplify & cloudfront
    - apis served and protected via AWS api gateway.
  - Data is encrypted both in transit and at rest using TLS & AES-256 algorithms respectively.
  - Automated threat detection at runtime using AWS Guard Duty.
  - Compliant with OWASP top 10
